

Prepared for: Kathryn Nicol — DTSC Employee / CC3PO Contractor Liaison Date: May 11, 2026 | Classification: Confidential

The Problem

WHY COPILOT ISN'T ENOUGH FOR DTSC

DTSC manages hazardous waste permits, violation tracking, facility inspections, and public records requests across **10,000+ regulated facilities**. Current systems (HWTS, eVQ) are **legacy, manual, and siloed**.

- **Copilot sends data to Microsoft's cloud** — environmental and citizen data leaves DTSC's control
- **Copilot can't learn DTSC's regulations** — it's a general assistant, not specialized for hazardous waste law
- **Copilot has no memory** — it doesn't improve from day to day or learn agency-specific workflows
- **The Exide response showed the gap** — 10,000+ contaminated properties, slow coordination, public criticism for delayed action

The Solution

SELF-HOSTED AI AGENTS — DATA STAYS ON DTSC'S SERVERS

CC3PO deploys a **village of specialized AI agents** directly on DTSC infrastructure. Every agent is purpose-built for regulatory work. Data never leaves the agency's network.

- **Agents that learn your regulations** — trained on California Code of Regulations Title 22, HSC, and DTSC-specific policies
- **Compound intelligence** — agents share knowledge, improve from every interaction, and retain memory across sessions
- **Self-hosted on your infrastructure** — zero data leaves DTSC servers. Full audit trail. Full control.
- **Specialized, not generic** — each agent handles a specific function (permits, violations, inspections, public records)

Head-to-Head

CAPABILITY	MICROSOFT COPILOT	CC3PO SELF-HOSTED
Data stays on agency servers	✗ Cloud-based	✓ Self-hosted
Learns agency regulations	✗ General knowledge only	✓ Title 22 / HSC trained
Memory across sessions	✗ No persistent memory	✓ Grows smarter daily
Specialized agents per function	✗ One generic assistant	✓ 5+ specialized agents
CPRA response automation	✗ Manual prompts needed	✓ Auto-drafts responses
Violation pattern detection	✗ No pattern analysis	✓ Cross-facility analysis
Full audit trail	✗ Limited logging	✓ Every action logged
Works offline / air-gapped	✗ Requires internet	✓ Local deployment

5 Immediate Use Cases

Permit Processing

Auto-review hazardous waste permit applications against Title 22. Flag incomplete submissions, missing data, and compliance gaps before human review.

Violation Pattern Analysis

Detect patterns across 10,000+ facilities. Identify repeat violators, geographic clusters, and emerging risks before they become crises.

CPRA Response Automation

Auto-draft public records responses. Reduce turnaround from days to hours. Maintain full compliance with disclosure requirements.

Inspection Scheduling

Prioritize inspections based on violation history, risk profiles, and time since last visit — not just calendar rotation.

Inter-Agency Coordination

Share data with CalEPA, Regional Water Boards, and local agencies through controlled, auditable channels — with privacy controls.

Exide-Type Rapid Response

Coordinate multi-agency emergency response. Track 10,000+ properties, automate resident notifications, and manage remediation timelines.

Pilot Program

PHASE	TIMELINE	DELIVERABLE
1. Assessment	Week 1	Map DTSC workflows, identify highest-impact automation points
2. Demo	Week 2-3	Live demonstration with DTSC-specific data on DTSC infrastructure
3. Pilot	30 days	Deploy 2-3 agents for one division. Measure time saved, errors caught, compliance improved.
4. Scale	60-90 days	Expand to all divisions. Full village deployment.

Why Now

CALIFORNIA IS ACTIVELY CHOOSING AI — BUT NOT COPILOT

California launched the **Poppy pilot** (GenAI for state workers) and CDTFB is using **Claude for tax assistance**. Both are **cloud-based**. DTSC has **no AI yet** — meaning first-mover advantage for a self-hosted solution that respects data sovereignty.

The window is open now. State agencies are being directed to adopt AI. The question isn't whether DTSC will use AI — it's whether the solution will keep data under agency control or send it to a third-party cloud.

Ready to Talk

We'll demo live, on your infrastructure, with your data. No slide decks. No theory. Just proof.
